1. Project Idea

Activo is a children's activity management platform built around one complete journey: helping families discover meaningful activities and giving parents a clear place to manage their children's participation. Instead of separating activity discovery, coach information, registration, enrollment, schedules, and feedback into disconnected steps, Activo brings them together in one organized experience.

The platform focuses on activities that support children's physical, creative, social, and personal development. Parents can explore what each activity offers, understand its requirements and objectives, learn about the coach, register their children, choose suitable activities, and later evaluate the experience. At the same time, the administrator view provides an overview of the children, coaches, activities, and participation relationships.

2. The Activo Experience

Activo is designed around the full activity lifecycle rather than a single registration form. A parent can begin by discovering an activity, review its purpose and coach, create or access a child's profile, enroll the child, and then provide feedback after the experience. This creates a clear connection between discovery, decision-making, participation, and evaluation.

Discover	Understand	Register	Enroll	Participate	Evaluate
----------	------------	----------	--------	-------------	----------

3. Main Platform Areas

Home Page

The Home page is the entry point to Activo. It communicates the platform's vision, highlights recently available activities, presents parent testimonials, and gives users direct navigation to the main areas of the platform. Featured activity cards introduce options such as Horse Riding, Planting, Karate, Swimming, Handcraft, and Acting together with the developmental outcome of each activity.

Activities

The Activities page is the detailed discovery space. Each activity includes a description, assigned coach, schedule, requirements, and objectives. This allows parents to compare activities based not only on interest, but also on age suitability, expected outcomes, prerequisites, and timing. The documented activities include Swimming, Karate, Horse Riding, Theatre Arts, Gardening, and Handicrafts.

Coaches

The Coaches page introduces the people responsible for delivering the activities. Each coach profile includes a short professional description and the activity they specialize in. This adds context and trust to the parent's decision before enrollment. Dedicated schedule pages are also available for selected coaches.

Coach Schedules

The schedule pages present weekly availability in a timetable format. For example, the Faisal schedule maps swimming sessions across days and time slots, while the Omar schedule provides the same structured view for karate. These pages help connect the coach information with the practical timing of each activity.

Parent Dashboard

The Parent Dashboard is the parent's management center. It displays child profiles and provides sorting by name or age. It also connects the parent directly to the next actions: adding a new child, registering for activities, and evaluating activities. Newly registered child information can be carried into the parent experience using browser storage.

Register Kid

The Register Kid page creates the child's profile. The form gathers personal and contact information and applies validation rules before registration. This page is important because the child profile becomes the basis for later enrollment and management actions.

Activity Enrollment

The Activity Enrollment page turns discovery into participation. The parent selects a child and can choose one or more activities. A filtering mechanism organizes choices by coach, prerequisite, or objective, helping the parent narrow the available options according to what matters for the child. After selection, the enrollment flow summarizes the chosen activities and their coaches.

Activity Evaluation

The Activity Evaluation page gives the platform a feedback loop. Users choose an activity, select a star rating, and may provide written feedback. Required selections are validated before submission, making the evaluation process structured and easy to complete.

Administrator Dashboard

The Administrator Dashboard provides a high-level operational view of the platform. It groups information into registered children, coaches, and activities. Coach names are connected to their specialties and selected schedule pages, while activities show the assigned coach and participating children. A More interaction expands the registered-child list when additional records are needed.

4. Activity Portfolio

Activo does more than list activity names. Each option is presented with information that helps a parent understand why the activity may be valuable for a child.

Activity	Coach	Focus	Examples of Value
Swimming	Faisal Ahmed	Water skills and fitness	Water safety, endurance, confidence
Karate	Omar Khalid	Martial arts and discipline	Strength, self-confidence, self-discipline
Horse Riding	Fabio Matteo	Riding and balance	Control, focus, balance,

			confidence
Theatre Arts	James William	Performance and expression	Public speaking, teamwork, creativity
Gardening	Wang Mei	Nature and sustainability	Plant care, sustainability awareness, creativity
Handicrafts	Saleh Yousuf	Creative making	Fine motor skills, creativity, patience

5. Key Interactive Functions

- **Registration validation:** Checks the information entered in the child registration form before completing registration.
- **Child data continuity:** Registered child names are stored in the browser so they can appear in relevant parent and enrollment experiences.
- **Sorting:** The Parent Dashboard can sort children A-Z, Z-A, youngest-to-oldest, or oldest-to-youngest.
- **Smart activity filtering:** Enrollment choices can be filtered using coach, prerequisite, or objective information.
- **Multiple activity selection:** A parent can select more than one activity for a child during the enrollment process.
- **Evaluation validation:** The evaluation flow ensures that an activity and rating are selected before completion.
- **Dynamic weekly schedule context:** Coach schedule pages use the current week context while presenting activity time slots.
- **Theme customization:** The Customize control switches the platform to an alternative visual theme without changing the core experience.
- **Expandable administrator information:** The administrator can reveal additional registered-child records using the More control.

6. Interface Walkthrough

The following screenshots show the major user-facing parts of Activo and illustrate how the pages work together as one connected platform.

6.1 Child Registration

This page gives parents a dedicated form for creating a child profile. It collects the information needed to identify and manage the child, including name, date of birth, age, gender, photo, physical information, phone number, and email. The registration flow also validates the entered data before accepting it, helping keep the information consistent for later use across the platform.

6.2 Parent Dashboard

The Parent Dashboard acts as the parent's central control area. It presents the parent's children as individual profiles and allows the list to be sorted alphabetically or by age. From the same dashboard, the parent can move directly to the three main management actions: adding a child, registering a child for activities, and evaluating an activity.

6.3 Home Page

The Home page establishes Activo's identity and purpose: helping children explore interests, build skills, gain confidence, and participate in engaging experiences. It also serves as the main navigation hub, connecting visitors to activities, coaches, parent services, and administrator functions.

6.4 Customizable Experience

Activo includes a Customize feature that changes the visual theme of the platform. The alternative blue appearance demonstrates a more personalized experience while preserving the same content, navigation, and functionality.

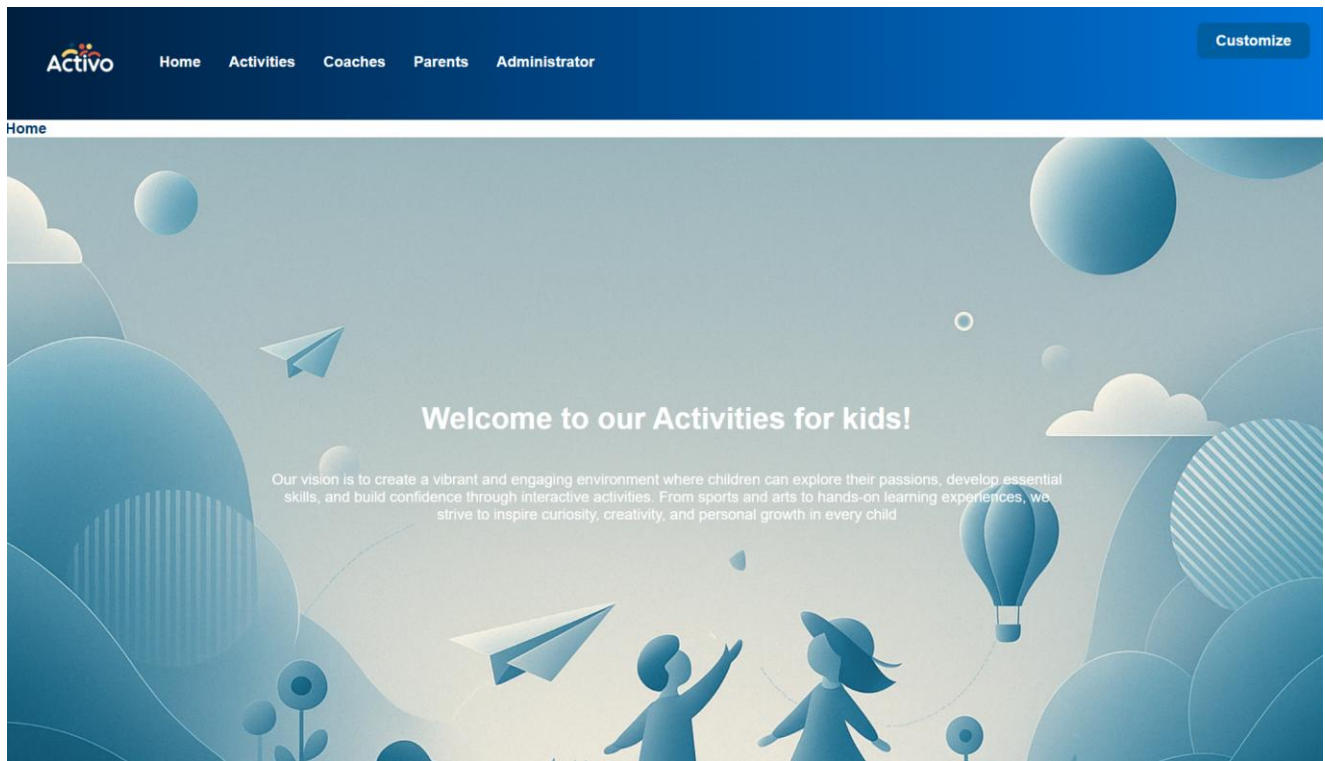

Figure 4. Customizable Experience

6.5 Activity Evaluation

The Activity Evaluation page closes the activity journey by giving users a structured way to share their experience. A user selects the activity, assigns a star rating, and can add written feedback. The page validates the required selections before accepting the evaluation.

The image shows a screenshot of the 'Activity Evaluation' form. The form is titled 'Activity Evaluation' in a large, bold, black font. Below the title, there are three sections: 'Choose Activity:', 'Rate Activity:', and 'Your Feedback:'. The 'Choose Activity:' section has a dropdown menu with the text '-- Select Activity --'. The 'Rate Activity:' section has five stars, with the first four stars filled and the fifth star empty. The 'Your Feedback:' section has a text input field with the placeholder text 'Your feedback helps us improve future activities!'. At the bottom of the form is a large orange button labeled 'Done'.

Figure 5. Activity Evaluation

6.6 Activity Enrollment

The Activity Enrollment page connects each child with suitable activities. Parents select a registered child, browse the available activity cards, and can choose multiple activities in one enrollment flow. The filtering system supports discovery by coach, prerequisite, or activity objective, making selection more purposeful than a simple activity list.

7. Platform Structure

The pages are organized around the roles and actions needed in the activity journey. Navigation links keep the major areas connected, while shared styling and interaction patterns create a consistent experience across the platform.

- Home - introduction, featured activities, testimonials, and navigation.
- Activities - detailed activity information, schedules, requirements, objectives, and coaches.
- Coaches - coach profiles and access to schedule information.
- Parent Dashboard - child management and parent actions.
- Register Kid - child profile creation and validation.
- Activity Enrollment - child selection, filtering, activity selection, and enrollment confirmation.
- Activity Evaluation - ratings and written feedback.
- Administrator Dashboard - overview of registered children, coaches, activities, and participants.
- Coach Schedules - weekly timetable views for activity sessions.

8. Technologies and Implementation

Technology	Role in Activo
HTML5	Structures the platform pages, navigation, forms, activity cards, dashboards, and schedules.

CSS3	Defines Activo's visual identity, layouts, cards, forms, navigation, responsive presentation, and alternative theme.
JavaScript	Drives validation, registration behavior, activity filtering, enrollment, sorting, evaluation, schedule behavior, expandable records, and customization.
LocalStorage	Maintains selected child information across relevant browser interactions.
Bootstrap	Supports the structured card layout used in the administrator experience.
Google Fonts	Supports the typography used across the platform.

9. Design Direction

Activo uses a warm, playful visual language intended to feel welcoming to families and appropriate for children's activities. Orange, beige, and yellow tones, rounded cards, large visual sections, and activity imagery create an energetic identity. The optional blue theme demonstrates that the same experience can adapt visually while keeping navigation and functionality consistent.

10. Conclusion

Activo brings the essential parts of children's activity management into one connected experience. Its strength is the relationship between its pages: activities provide meaningful information, coaches add context, child profiles support personalized management, enrollment turns choices into participation, schedules make activities practical, evaluation creates a feedback loop, and the administrator view brings the platform's key information together. The result is a clear and engaging system centered on helping parents make informed activity choices while supporting children's growth, confidence, creativity, and participation.
